Preface .....	vi
1—Introduction.....	1
Background.....	1
Hydraulic Disturbances Generated by Navigation Traffic .....	2
Study Objectives and Scope.....	4
2—Materials and Methods.....	5
Test Description.....	5
Plant Species Selection .....	8
Plant Culture Techniques.....	9
Pretreatment Plant Measurements.....	12
Study Design and Execution.....	13
Data Analysis.....	15
Mechanical Properties of Field Plants.....	15
3—Results.....	17
Pretreatment Measurements.....	17
Damage to Milfoil Plants (Treatment Comparisons).....	21
Damage to Vallisneria Plants (Treatment Comparisons) .....	25
Species, Age, and Wave Period Effects .....	26
Observations of Test Plant Exposure to Waves .....	31
Wave Height Effects on Tensile Loading .....	37
Mechanical Properties of Field Plants.....	39
4—Discussion.....	41
Factors Affecting Direct Damage .....	41
Ecological Consequences of Direct Damage .....	42

Limitations of Present Study.....	44
5—Conclusions.....	46
References.....	48
Appendix A: Physical and Chemical Characteristics of Fertilized Brown’s Lake Sediment.....	A1

SF 298

## List of Figures

---

Figure 1. Types of waves and currents generated by commercial navigation traffic .....	3
Figure 2. Schematic of flume facility.....	6
Figure 3. Pretreatment measurements for Eurasian watermilfoil plants.....	18
Figure 4. Eurasian watermilfoil shoots .....	19
Figure 5. Pretreatment measurements for vallisneria plants .....	20
Figure 6. Breaking forces of vallisneria leaves and tensile strengths of vallisneria flower pedicels.....	22
Figure 7. Cumulative numbers of fragments from the different species and age groups .....	28
Figure 8. Cumulative numbers of fragments by fragment type for the individual treatment series.....	29
Figure 9. Cumulative biomass of fragments from the different species and age groups .....	30
Figure 10. Illustration of the directions of main currents within a repeating wave series .....	31
Figure 11. Illustration of the effects of the three current settings on the orientation of an 8-week-old Eurasian watermilfoil shoot within the flume .....	33
Figure 12. Illustration of generalized movement patterns of 8-week-old Eurasian watermilfoil shoots during passage of a 0.3-m wave under the high current velocity (0.25 m/sec) treatments.....	34

Figure 13.	Illustration of generalized movement patterns of 8-week-old Eurasian watermilfoil shoots during passage of a 0.3-m wave under the intermediate current velocity (0.10 m/sec) treatments .....	35
Figure 14.	Illustration of generalized movement patterns of 8-week-old Eurasian watermilfoil shoots during passage of a 0.3-m wave under treatments with no ambient current .....	36
Figure 15.	Tensile loadings measured on an 8-week-old Eurasian watermilfoil shoot .....	38
Figure 16.	Breaking forces of plant shoots collected from Lake Onalaska, WI, August 1995 .....	40

## List of Tables

---

Table 1.	Planting Schedule for Culture Plants.....	11
Table 2.	Hydrological Conditions and Culture Tank Sources of Test Plants for Each Treatment .....	14
Table 3.	Cumulative Numbers of Fragments Broken from Eurasian Watermilfoil Plants Exposed to Each of the Hydrological Treatments.....	23
Table 4.	Cumulative Biomass (g Dwt) of Fragments Broken from Eurasian Watermilfoil Plants Exposed to Each of the Hydrological Treatments .....	24
Table 5.	Cumulative Numbers of Fragments Broken from Vallisneria Plants Exposed to Each of the Hydrological Treatments.....	25
Table 6.	Cumulative Biomass (g Dwt) of Fragments Broken from Vallisneria Plants Exposed to Each of the Hydrological Treatments.....	27
