PUBLIC NOTICE

REQUEST FOR PERMISSION TO MODIFY A U.S. ARMY CORPS OF ENGINEERS PROJECT UNDER SECTION 408

TITLE: Marshalltown Riverview Park Pump Station at Right Descending Bank Iowa River/Left Descending Bank Linn Creek (North) levee, Marshall County, Iowa (**Public Notice ID #2020-0018**)

PUBLIC NOTICE COMMENT PERIOD:

Begins: March 22, 2021

Expires: April 21, 2021

Interested parties are hereby notified that an application has been received for a Department of the Army Section 408 permission for certain work at or near a federally-authorized flood risk management project of the United States, as described below and shown on attached figures. Written comments are being solicited from anyone having an interest in the requested alteration. Comments will become part of the U.S. Army Corps of Engineers' (USACE) administrative record and will be considered in determining whether to approve the request. Comments supporting, opposing, or identifying concerns that should be considered by the USACE in its decisions process are all welcome. Comments providing substantive information or a rationale for the commenter's position are the most helpful.

This public notice is not a paid advertisement and is for public information only. Issuance of this notice does not imply USACE endorsement of the project as described.

REQUESTER: In compliance with 33 USC 408 (Section 14 of the Rivers and Harbors Act of 1899; hereinafter Section 408), the City of Marshalltown, Iowa, and Stanley Consultants has requested permission to install a new trash rake on their existing pump station intake rack, retaining wall, and an associated service road. These alterations are within the Right Descending Bank (RDB) Iowa River/Right Descending Bank (LDB) Linn Creek (North) levee, an existing federally-authorized and non-federally operated and maintained urban flood protection project.

LOCATION: The proposed project is located at and around the Riverview Pump Station site at the RDB Iowa River/LDB Linn Creek (North) levee in Riverview Park in Marshalltown, Marshall County, Iowa.

LOCATION MAP(S)/DRAWING(S): See Figures 1 and 2.

REQUESTER'S PROPOSED ACTION: The City of Marshalltown has recently installed a mechanical bar screen over the twin box culverts that drain the detention pond on the inside of the RDB Iowa River/LDB Linn Creek (North) levee in Riverview Park. The twin culverts also serve as the inlet to the pump station, which provides interior drainage in the event of a flood on the Iowa River. The levee and pump station were constructed by the Corps of Engineers with the City as the local sponsor. The City operates and maintains the pump station and levee. The debris that is intercepted by the bar screen falls into a dumpster behind the headwall. To empty the dumpster, the City currently must use a crane from the crown of the levee. The proposed improvements will provide an access drive to the dumpster along the land-side toe of the levee. The design would involve a retaining wall to maintain the current crown elevation and would provide an access lane to the dumpster. The lane would be paved with 7" thick Portland Cement Concrete. A metal stairway adjacent to the retaining wall would provide personal access to the dumpster pad. The retaining wall and access lane would be designed to provide the same elevation, seepage restraint and slope stability as the current levee. Construction of the retaining wall, and the access road paving would not impact the height of the levee. Excavation for constructing the base slab for the retaining wall would cut into the original levee section. Almost all changes would occur outside of the original levee core, in areas that were overbuilt as part of the 1971 pump station construction. Construction would be planned for time of normal to low water on the Iowa River.

REGULATORY AUTHORITY: This request will be reviewed according to the provisions of Section 14 of the Rivers and Harbors Act of 1899 (33 U.S.C. 408). A requestor has the responsibility to acquire all other permissions or authorizations required by federal, state, and local laws or regulations, including any required permits from the USACE Regulatory Program under Section 10 of the Rivers and Harbors Act of 1899 (33 USC 403), Section 404 of the Clean Water Act (33 USC Section 1344) and/or Section 103 of the Marine Protection, Research and Sanctuaries Act of 1972 (33 USC 1413). The compliance determination for any Section 10/404/103 permit decision associated with the proposed alteration is separate from and will not be included in the Section 408 compliance determination. An approval under Section 408 does not grant any property rights or exclusive privileges nor does it authorize any injury to the property or rights of others.

EVALUATION: The decision whether to grant the requested permission for project modification under Section 408 is based on several factors which are outlined in USACE Engineer Circular (EC) 1165-2-216, *Policy and Procedural Guidance for Processing Requests to Alter US Army Corps of Engineers Civil Works Projects Pursuant to 33 USC 408*. The decision will reflect the national concern for both protection and utilization of important resources. The benefit which reasonably may be expected to accrue from the proposal must be balanced against its reasonably foreseeable detriments. Review of the requests for modification will be reviewed by a USACE technical review team considering the following factors:

1. *Impair the Usefulness of the Project Determination.* The review team will determine if the proposed alteration would limit the ability of the federally-authorized project to function as authorized, or would compromise or change any authorized project conditions, purposes or outputs. The decision whether to approve a request for modification would be based on a determination of no impairments.

2. *Injurious to the Public Interest Determination.* Proposed alterations will be reviewed to determine the probable impacts, including cumulative impacts, on the public interest. Evaluation of the probable impacts that the proposed alteration to the USACE project may have on the public interest requires a careful weighing of all those factors that are relevant in each particular case. Factors that may be relevant to the public interest depend upon the type of USACE project being altered and may include, but are not limited to, such things as conservation, economic development, historic properties, cultural resources, environmental impacts, water supply, water quality, flood hazards, floodplains, residual risk, induced damages, navigation, shore erosion or accretion, and recreation. The decision whether to approve an alteration will be determined by the consideration of whether benefits are commensurate with risks. If the potential detriments are found to outweigh the potential benefits, then it may be determined that the proposed alteration is injurious to the public interest.

3. *Environmental Compliance.* A decision on a Section 408 request is a federal action, and therefore subject to the National Environmental Policy Act (NEPA) and other environmental compliance requirements, including the National Historic Preservation Act and the Endangered Species Act. While ensuring compliance is the responsibility of USACE, the requester is providing all information that the Rock Island District identifies as necessary to satisfy all applicable federal laws, executive orders, regulations, policies, and ordinances. ***Based on information provided by the applicant to date, current Corps regulations governing NEPA implementation, and/or the contents of existing NEPA documentation if available, it is likely the proposed action will be determined to be categorically excluded (CATEX) from the need to prepare an Environmental Assessment or Environmental Impact Statement. This determination will be finalized following completion of agency coordination and prior to project implementation.***

This area has not been surveyed for cultural resources; however, this location has been highly disturbed by modern construction activities. The project area has very low potential to contain intact cultural resources. Further evaluation under Section 106 of the National Historic Preservation Act (54 USC § 306108) is not warranted.

4. *Technical Analysis.* The Rock Island District is working closely with the requestor to ensure all required technical plans, maps, drawings, and specifications are provided and complete. A District-led Agency Technical Review (ATR) is being conducted to determine any potential adverse impacts to the USACE-authorized flood protection system.

SOLICITATION OF COMMENTS: The District is soliciting comments from the public; Federal, state, and local agencies and officials; Indian Tribes; and other interested parties in order to consider and evaluate the impacts of the proposed activity. Any comments received will be considered by the U.S. Army Corps of Engineers to determine whether to issue, modify, condition or deny a permission for this proposal. To make this decision, comments are used to assess impacts on endangered species, historic properties, water quality, general environmental effects, and other public interest factors listed above. **Comments are considered in making a final determination whether the proposed action will be categorically excluded (CATEX) from the need to prepare further NEPA documentation.** Comments are also used to determine the need for a public hearing and to determine the overall public interest of the proposed activity.

It should be noted that materials submitted as part of the Section 408 request become part of the public record and are thus available to the general public under the procedures of the Freedom of Information Act (FOIA). Individuals may submit a written request to obtain materials under FOIA or make an appointment to view the project file at the Rock Island District Corps of Engineers, Office of Counsel, Rock Island Arsenal, Rock Island, Illinois; 309-794-5729.

It is presumed that all parties receiving this notice will wish to respond to this public notice; therefore, a lack of response will be interpreted as meaning that there is no objection to the project as described

COMMENT SUBMISSION AND ADDITIONAL INFORMATION: Written comments on the described work should reference the Public Notice ID found in the Title. Comments must reach this office no later than the above expiration date of the Public Notice to become part of the record and be considered in the decision. Comments or requests for additional information should be e-mailed or mailed to the following address:
