NCDCO-MO (26 Feb 81) 1st Ind
SUBJECT: Lakeshore Management Plan, Coralville Lake

DA, North Central Division, Corps of Engineers, 536 South Clark Street,
Chicago, Illinois 60605
7 April 1981

TO: District Engineer, Rock Island
ATTN: NCROD-R

1. The Lakeshore Management Plan for Coralville Lake is approved, subject to the following comments.

2. General Comments.

a. Add a foreword to indicate the authority under which this Lakeshore Management Plan is promulgated. Suggested language for the foreword is as follows:

"The rules and regulations in this Lakeshore Management Plan are promulgated under the authority of Section 4 of the 1944 Flood Control Act, as amended (Sec. 4, 59 Stat. 889, as amended; 16 U.S.C. 460d) and the Code of Federal Regulations, Title 36, Chapter III, Part 327.30."

b. Include a table of contents.

3. Specific Comments:

a. Page 2, Paragraph I.F., Comments. The comments listed here should be extracted and added as an Exhibit which is referenced in this paragraph. Further, the Exhibit should summarize the answers given to these questions and/or reference where the answers can be found in Exhibit 6.

b. Page 3, Paragraph I.H., 1st and 2nd Sentences. There is mention here of a final set of group floating dock specifications. However, there is no previous mention of when or how these specifications were made known to the public in the planning process. Modify the first sentence of this paragraph to indicate that these specifications were presented to the public in public meetings along with the balance of the plan.

c. Page 3, Paragraph II.A., Line 2. Change "contained" to "explained" and change "Exhibit 5" to "Exhibit 6".

d. Page 4, Paragraph IV, Line 5. Provide full ER identification, i.e., ER 1130-2-406.

e. Exhibit 3. Use the EIS comment/response format to explain what action was or will be taken in regard to specific comments in the letters in this Exhibit. See Inclosure 8 for an example of such a comment/response format.

f. Exhibit 3, 11 May 1979 Letter from the Iowa SHPO. This letter leaves an unresolved issue in regard to a field review for determining the type of archaeological studies necessary in connection with the Lakeshore Management Plan. Be sure to address this point in the comment/response section.

g. Exhibit 4. Add introductory information to this Exhibit to explain what the land use categories mean.

h. Exhibit 5, Page 1, Paragraph 2.e., Last Sentence. Add, ". . . completely at the expense of the applicant(s)."

i. Exhibit 5, Page 3, Paragraph 4.d. Change first two sentences to read, "Roofs may be flat, slightly sloped or pitched. Slightly sloped means designed to provide adequate drainage in case of snow."

j. Exhibit 6. If these regulations will be used apart from the total plan, add a cover sheet to identify the authority under which the regulations are promulgated. Wordage should be similar to that recommended in paragraph 2.a. of this Indorsement.

k. Exhibit 6, Page 2, Paragraph 4, Subparagraph 2.

(1) Change the first sentence to read, "All permits will be issued by the District Engineer." Then add, "Leases or licenses will be issued by the Rock Island Field Office of the Real Estate Division of the U.S. Army Engineer Division, North Central."

(2) In the present second sentence, change "lease/license" to "lease/ license/permit."

l. Exhibit 6, Page 3, Paragraph 4, Subparagraph 2. Change "In spite of" to "Notwithstanding".

m. Exhibit 6, Page 3, Paragraph 5, Line 6. Change to read, "... for the unauthorized structure is subject to all penalties provided by applicable statutes and regulations."

n. Exhibit 6, Page 3, Paragraph 5, Subparagraph 2, Line 4. Reference is made here to the "Park Manager." In all other parts of this plan, the project person of responsibility is referred to as the "Resource Manager". The District should decide which term is most appropriate and then be consistent throughout the plan.

o. Exhibit 6, Page 4, Paragraph 6.b. Change sentence to read, " in no way absolves him from obtaining required State or local permits, if any."

p. Exhibit 6, Page 4, Paragraph 7, Line 7. Add, "... at the licensee's expense and within thirty (30) calendar days of expiration."

q. Exhibit 6, Page 4, Paragraph 7, Subparagraph 2, Last Line. Change to read, "... the dock will be removed within thirty (30) calendar days."

r. Exhibit 6, Page 5, Paragraph 8.b. Change to read, "... or own property adjoining Government lands..."

NCDCO-MO (26 Feb 81) 1st Ind 7 April 1981
SUBJECT: Lakeshore Management Plan, Coralville Lake

s. Exhibit 6, Page 5, Paragraph 8.c. Change to read, "...who reside within one mile of..."

t. Exhibit 6, Page 5, Paragraph 9.a.(1), 1st Sentence. Add to the end of the sentence, "...as explained in the following subparagraphs."

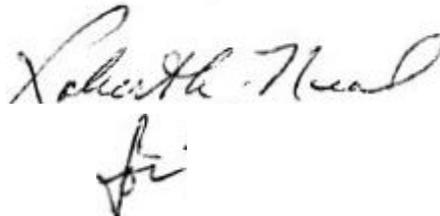

u. Exhibit 6, Page 6, Paragraph 9.d., Line 8. Explain the basis for selection of the 1 August 1979 date in relation to Lakeshore Management.

v. Exhibit 6, Page 7, Paragraph 9.i. 1st Line. Change to read, "All applicable Federal, State and local laws, . . ."

w. Exhibit 6, Page 8, Paragraph 9.j.(3), 2nd Line. Change to read, "... of a legal authorized facility, . . ."

4. When changes identified in this Indorsement have been accomplished, please provide three (3) copies of the modified Lakeshore Management Plan to NCDCO-MO.

LAKESHORE MANAGEMENT PLAN

US Army Engineer District, Rock Island
Corps of Engineers

FOREWARD

The rules and regulations in this Lakeshore Management Plan are promulgated under the authority of Section 4 of the 1944 Flood Control Act, as amended (Sec. 4, 59 Stat. 889, as amended; 16 U.S.C. 460d) and the Code of Federal Regulations, Title 36, Chapter III, Part 327.30.

APPENDIX F TO THE MASTER PLAN FOR CORALVILLE LAKE, IOWA

1. Plan Formulation. In preparation for holding public meetings and implementing the plan, the following steps were taken:

A. In keeping with the requirements of ER 1130-2-406, a moratorium was placed on any new permits or licenses. If a structure or facility existed, it was allowed to remain in place if it was in a safe condition, until the lakeshore management plan could be implemented.

B. Aerial photographs were acquired and these photographs were the latest available and on a scale of 1:7,000. These photos were trimmed, joined together, mounted on a solid backing, and covered with an acetate material. This composite photo of the entire lake was used at the public meetings to depict proposed lakeshore allocations. The composite photo of the lake will be retained in the project office as a working tool in implementing the lakeshore management plan.

C. An interdisciplinary team, consisting of members of Operations, Real Estate, and Engineering Divisions, reviewed the aerial photographs and other pertinent information to determine the location of the limited development areas. It was determined that the six areas which currently have dock and other facilities on them would be the only areas that would be so designated as "limited development".

D. After the lakeshore area was allocated into the various categories, a proposed set of regulations was drafted. These proposed regulations were then routed through the various office elements, including Counsel, Real Estate, and Planning, for comment and approval. When the allocation maps and proposed regulations were finalized, the public meeting was then scheduled. A copy of the announcement for the first public meeting is inclosed as Exhibit 1.

E. Mailing lists were developed, which included, but were not limited to, the following:

1. All current and past holders of letters of no objection, permits, licenses, and leases.
2. All adjacent landowners who had encroached upon public lands.
3. Various local area development groups, lake associations, subdividers, and planning groups.
4. Various Federal, State, and local organizations, and clearing houses who might be interested.
5. United States Senators and Representatives, mayors, county commissioners, and other elected officials.
6. Various postmasters (for posting on bulletin boards in local post offices).

The proposed regulations and dock specifications were available upon request prior to the meeting and were also available for inspection after the first public meeting. A mailing list is shown as Exhibit 2. All local media were advised of the time and place of the first public meeting.

F. The initial public meeting was held at the North Liberty Community Hall on 30 November 1978. There were approximately 45 people in attendance. A transcript was taken at the meeting, and these transcripts are kept in permanent file at the District Office and are available for public inspection. Comments from interested parties were received for consideration for 30 calendar days after the public meeting; however, any comment received, regardless of whether it was received within the 30 days or not, was considered up until the time of the formulation of the final regulation. Oral and written comments relative to the proposed regulations and dock specifications were as follows:

What constitutes a single dock? - 1

What happens when a person terminates his interest in a community dock? - 1

Who can put in a slip/dock? 6

Size of the community docks - 7

Mooring buoys - 2

Procedure for enlargement of limited development areas- 2

How the location and size of the limited development areas were selected - 1

Tying boats to the bank - 6

Clarification of prohibited access - 1

Reasoning behind shoreline management-

Remaining overnight on a vessel - 1

Removal of docks in the winter - 1

Informing the public of pool fluctuation - 1

Restricted use of docks by general public and liability- 3

Marking/removing stumps - 2

All comments listed above were considered and evaluated in arriving at the final regulation, which is part of this plan. A listing of comments and their responses are attached as Exhibit 3.

G. The next step was to finalize the regulation and hold a second public meeting. This meeting was held on 18 April 1979, again at the North Liberty Community Hall. Surprisingly, there were slightly over 100 people in attendance. This was over twice the number at the first meeting, which seems somewhat odd since the purpose of this second meeting was basically to demonstrate to the public the incorporation of their comments and to air publicly the final version of the regulation.

H. Simultaneously, the final regulation and a final set of group floating dock specifications were developed. A copy of the final version of the dock specifications is also included in this plan as Exhibit 5. Generally, the second public meeting went extremely well, with the general feeling perceived by those in attendance that the Corps had indeed attempted to accommodate the comments in the final version of the regulation. Exhibit 4 shows the shoreline management designations finalized at the meeting.

II. Land and Water Activities Relating to Lakeshore Management. a.

All land activities relating to lakeshore management are explained in the regulation (Exhibit 6). All activities by adjacent private landowners on public lands will continue to be under direct Corps control and will be covered by either a permit, license, or lease.

B. Water activities, such as zoning or buoy placement, is a dynamic condition and is subject to review each year. All buoys used on the project, with the exception of anchor buoys used by legal concessionaires, are Corps-owned, and are inscribed with the standard inland waterway marking system legends. All zoning of the lake for various users or restrictions is a joint venture between the Iowa Conservation Commission and the Corps of Engineers. Zoning is reviewed and adjustments are jointly made to eliminate trouble spots or to meet changing use patterns.

III. Sanitary and Solid Waste Disposal. All solid waste disposed by Corps operations is deposited in State-approved landfills. Sanitary facilities are either water born systems with septic fields or vault toilets. Current information on the sanitary facilities at specific recreation areas is available in the Recreation-Resource Management System.

IV. Implementation of Lakeshore Management Plan. Due to current and past Recreation-Resource Management policy practiced in the Rock Island District and development at this project to date, only minor revisions have to be made to conform the lakeshore management plan to ER 1130-2-406, with the resulting minimal impact upon existing permit or structure holders. For all practical purposes, the lakeshore management plan for Coralville Lake is already implemented.

PUBLIC MEETING ON CORALVILLE LAKESHORE

The Rock Island District, US Army Corps of Engineers, is in the process of revising the master resource management plan for Coralville Lake and the project lands.

This revision includes indepth studies, published as appendices, to the basic plan, on the resources of the project area. One such appendix will cover an important resource, the management of the lakeshore area around Coralville Lake.

A public meeting will be held at 7 p.m. Thursday, November 30, at the North Liberty Community Hall in North Liberty, Iowa, to allow public review and comment on this lakeshore management plan for Coralville Lake.

All interested persons are invited and urged to attend this meeting. This includes representatives of federal and non-federal agencies, business and civic organizations, property owners and other interests.

Comments and Responses

Summary of Verbal Comments

Comment	Responses
What is a single dock:	A dock used by one household in an area where more than one household has requested a dock.
What happens when one person leaves a community dock?	If the dock is in a Limited Development Area, nothing happens. If the dock is outside such an area, the portion of the dock vacated is removed. (See Section 7 of the Lakeshore Management Regulations.)
Who can request a permit for a dock?	Refer to Section 8 of the Lakeshore Management Regulations.
How big does a dock have to get before a neighboring dock is authorized?	Six to eight slips at the discretion of the Resource Manager.
Does "prohibited access" mean pedestrian access too?	Yes. However, the prohibition is actively enforced only for those areas posted at the site.
Why is the lakeshore plan being written?	It is required by regulation, and is intended to protect the interest of the general public.
Can you camp in a boat?	Refer to CFR Title 36 Part 327.3(b).
Do docks have to be removed in winter?	The State requires that they be removed above flood pool.
Will the Corps inform dock users of pool changes?	News releases are issued at pool changes, and it is on the recorded message for Coralville Lake. No special effort will be made to inform dock owners.
Will mooring buoys be allowed:	Yes. Refer to Section 9c of the Lakeshore Management Regulations.
How can the lakeshore zoning be changed after the plan is approved?	Provide the District Engineer with a written request for a change in the lakeshore management plan.

Do you have to let someone into your community dock?

The Resource Manager can direct that a person be given a slip in a community dock.

How were the Limited Development Zones selected?

They are the areas that currently have private docks.

Can boats be pulled up on the bank?

Only if they are left for less than 24 hours.

Can bank ties be used?

Yes. Refer to Section 9b of the Lakeshore Management Regulations.

How do we keep undesirable people off the docks?

The sheriff can be called if there is vandalism.

Who owns the docks?

They are privately owned, but are on public land and cannot be closed to the public. Only use of the docks as boat moorings can be restricted to the dock's owners.

I think having minimum specifications for docks is a good idea.

No comment.

St. Louis, Mo. Dec. 4, 1978

Dear Monty Hanes

We enjoyed being able to attend the informative meeting with the Corps of Engineers representatives there Nov 30, 1975

Our home is located on lot No. 1 in Coralville Lake Manor. The cove in front of our home & some of the adjoining lake shore areas designated on your map as a Limited Development Area. Coralville Lake Manor dock is one of the original dock locations designated by the Corps of Engineers. Since the original dock was constructed erosion from the surrounding banks have filled in the water area so that accessibility to the dock is impossible most of the year. As pointed out at the meeting, the dock area was supposed to have 24 hr. surveillance. This is impossible because of a high rise hill, immediately in front of the dock, and no home is located so that it can be seen at anytime. Boats have been damaged, motors stolen, because the dock cannot be seen, unless a person is physically present down there.

We would like to get a permit to dig a canal, at our expense, from the main body of water to inside the cove, where we could put the dock, away from the main body of water, where it would be visible 24 hrs per day, and accessible to the community. The whole side of the lake is inaccessible for launching boats into the lake because of increased silt accumulation through the year, including Sandy Beach, where the water is maintained at the average level.

We talked to Jim Osche, & he advised we write you a letter stating our problems & suggested solutions.

Would it be possible for you to contact me, L. H. Petersohn R. 174, Box 2850, Solon, Ia 52353, telephone 548-4082, to see the lay of the land, & work something out with us

Sincerely,
L. H. Petersohn

Corps' Response to

L. H. Petersohn

Mr. Petersohn's comments did not relate to the Lakeshore Management Plan.

U.S. Army Corp of Engineers
Coralville Lake

Dear Mr. Osche:

This letter is in regard to the proposed regulations pertaining to the Coralville Lake lakeshore management.

Please consider this a request for a change in the regulation on prohibited access. The area I am referring to is the first cove south of Mehaffey Bridge on the west shore line. I would ask that you consider changing the regulation from prohibited access to limited development area.

Since this area is on the west shore line, it is protected from the wind. If a dock was built in the cove, chances of wind damage would be slight. Also, it would be unlikely piece of a dock would break loose and flow into the main channel of the water, causing hazards for others.

If you need any further information, please feel free to contact me.

Sincerely,

James D. Tallman

Corps' Response to

James D. Tallman

Area in question zoned for limited development.

December 5, 1978

Mr. Henry G. Pfeister
Chief, Operations Division
Rock Island District, Corps of Engineers
Clock Tower Building
Rock Island, IL 61201

Dear Mr. Pfeister:

Our office has received the public announcement of the planning meeting for public review and comment on the lakeshore management plan for the Coralville Reservoir held November 30, 1978.

The Division was unable to be represented at the meeting and we are very interested in reviewing and commenting on the plan.

It is requested that a copy of the plan be forwarded to us for review and comment.

Sincerely,

Adrian D. Anderson, Director
State Historic Preservation Officer

Colonel Frederick W. Mueller
District Engineer
Rock Island District, Corps of Engineers
Clock Tower Building
Rock Island, IL 61201

Re: Preliminary proposed regulations pertaining to Coralville Lake, Iowa;
Lakeshore Management.

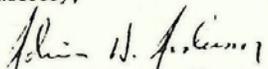

Dear Colonel Mueller:

Having examined the above referenced proposed regulations, it is my opinion that there may result numerous impacts on presently unknown archaeological properties along the lake's shore.

It is recommended that the regulations be revised to reflect the responsibility of the Corps of Engineers to locate, identify, assess, and manage archaeological properties along the shore. As other regulations are developed for lease on land, such responsibilities should also be explicitly included.

Such revision may be extensive. It is requested that the development of the revisions be coordinated with the Division of Historic Preservation.

Sincerely,

Adrian D. Anderson, Director
State Historic Preservation Officer

Mr. Henry G. Pfiester
Chief, Operations Division
Rock Island District, Corps of Engineers
Clock Tower Building
Rock Island, IL 61201

Re: NCROD-R; shoreline management regulations, Coralville Lake, Johnson County,
Iowa.

Dear Mr. Pfiester:

Your letter of March 5, 1979 and the maps enclosed with it are appreciated. Based on our current inventory information, no archaeological sites are located in the proposed limited development areas (for purposes of the management regulations).

As you know the survey coverage is, however, inadequate. It is requested that you arrange a time when a member or members of your staff would be available for a field inspection of the areas involved. I or a member of my staff will participate in such a field inspection. The proposed purpose of the inspection is to arrive at appropriate recommendations regarding surveys of the areas. The inspection would also serve as a device to obtain the necessary information to complete our review of the proposed regulations. We would appreciate receiving a copy of the final version of the regulations in time to ~~review~~ ^{review} it before the public meeting of 18 April 1979.

Sincerely,

Adrian D. Anderson, Director
State Historic Preservation Officer

Re: NCROD-R; shoreline management regulations, Coralville Lake, Johnson County,
Iowa.

Dear Mr. Pfiester:

As a follow-up to our letter of March 21, 1979 concerning the above referenced
action, we attempted to conduct the requested field review on May 10, 1979. The
review could not be conducted due to high water levels.

We remain interested in conducting the field review and will coordinate with
your staff in the near future to establish another schedule.

Sincerely,

Adrian D. Anderson, Director
State Historic Preservation Officer

ADA/lv

Corps' Response to
State Historic Preservation Office

11 May 1979 letter

The SHPD never contacted RID to establish an alternative survey
date. A complete archaeological survey of the Coralville
lakeshore is scheduled for the spring of 1982. Since the
implementation of the plan will not change the status quo, a
partial survey at this time is not considered efficient use
of available resources.

JAN 05 1979

Col. F. W. Mueller, Jr.
District Engineer
Rock Island District
Corps of Engineers
Clock Tower Building
Rock Island, Illinois 61201

Dear Col. Mueller:

This is in reference to your letter of December 8, 1978 (Attn: OD-R) to the Chief, Office of Archeology and Historic Preservation, Washington, D.C., regarding the proposed Coralville Lake Shoreline Management regulations. We would like to provide the following comments for your consideration in preparation of the final rules.

Page 1, Section 1. c. References: Add subsection (7) An Act for the Preservation of American Antiquities, June 8, 1906, PL 59-209.

Page 1, Section 1. d. Policy: Insert in the first sentence the phrase "preserve cultural resources" as follows: "It is the policy of the Chief of Engineers to manage and protect the shorelines of all lakes under his jurisdiction, to properly maintain fish and wildlife habitat, aesthetic quality, natural environmental conditions, and protect cultural resources and to promote the safe and healthful use of the shorelines for recreational purposes by all of the American people."

Page 7, Section 8. g. Archeological Sites and Cuts and Fills: Change this subsection as follows:

- (1) The digging into, excavating, disturbing or removing of an archeological site or artifact is prohibited. Disturbing or removing any cultural remain is subject to the provisions and sanctions of the Antiquities Act of 1906.
- (2) No permit, lease or license will be issued by the District Engineer or his authorized representative for any structure or action that will affect a cultural resource until proper steps have been taken to protect or preserve the resource.
- (3) The alteration of the natural terrain by making cuts or fills, unless in conjunction with construction of a legal facility, is prohibited.

If you have any questions concerning these suggested changes please do not hesitate to contact us.

Sincerely yours,

Jack R Rudy

December 1, 1978

Mr. Jim Osche
Operations Division
U.S. Engineer District Rock Island
Clock Tower Building
Rock Island, Illinois 61202

Dear Jim:

This is a note to follow-up the meeting of 11-30-78
in North Liberty.

I am writing in regard to site 5 (Twin View Heights)
of the Reservoir. I will be glad to sign a permit for
the community dock at site 5. However, I do believe
the docks should be a two family dock in size. This
has worked out much better as individuals can move the
dock with fluctuating water. We have not lost a dock
in several years after going to the two family dock.
Also, the two family dock can be readily pulled out in
the fall and put in in the spring.

I would also like to address mooring buoys. It is
much safer to moor a four ton 35 foot houseboat than
it is to tie to a dock on the shore. I would suggest
that State approved mooring buoys be allowed if a permit
is obtained for the boat.

Thanks for your consideration and I look forward to
working with you in the spring.

Yours truly,

David W. Reynoldson
North Twin View Heights
Solon, Iowa 52333

Corps' Response to

David Reynoldson

1. The size of docks will be at the discretion of Resource Manager. The decision will be based on the local need for slips and the available space in the Limited Development zones.
2. Lakeshore Management Regulations changed to allow mooring buoys (See Section 9c).

Rock Island District
Clock Tower Building
Rock Island, Illinois 61201

Dear Col. Mueller:

I have reviewed the Corps of Engineer's proposed regulations pertaining to Coralville Lake, Iowa.

The preliminary proposal is certainly an approach to control of the private development and to organize standards on private encroachment.

The Johnson County Conservation Board totally supports any action by the Army Corps of Engineers in Coralville Lakeshore management that meets the definite need for keeping these shorelines in a near natural condition and available for public use.

Sincerely,

R. G. Dunlap
Director
Johnson County Conservation Board

ATTENTION: OD-R

Dear Colonel Mueller:

In response to your letter of January 8, 1979 with reference to input into the formulation of the proposed final shoreline management rules for Coralville Lake, copies of these rules were circulated for staff review and comment. Our staff did not feel that the proposal as planned will effect that portion of the Coralville Reservoir Project, which we have license for fish and wildlife management.

We feel that the proposed zoning will improve wildlife habitat on the area by limiting public use and eliminating private encroachment.

Also, we strongly support the enforcement of Item 8.e., Vegetation Alteration, Tree Cutting, Trimming and Burning.

Many private landowners adjacent to the Federal land have removed trees from the Federal land to improve their view of public water. Removal of such vegetation has adverse impacts on too many wildlife species.

Thanks for the opportunity to comment on these proposals at this time.

Sincerely,

A handwritten signature in cursive script, appearing to read "Fred A. Priewert".

Corps' Response to
Iowa Conservation Commission

Concur. Section 8e will be enforced.

On Nov 30, 1978 George Gardian
and those that were with him
held a meeting in Park Pointe
as to the shore line on the
Crescent Cove, this meeting
was handled very well, and
gave those of us that were
there, a feeling of co-operation
between the people & the Corp.

Those of us that live on the
lake, know that the management
does a fine job, with the small
amount of help & money that
they have, but I would like to
ask if the boat ramp at Sandif
Creek could be dug about
four or five feet deep and to
increase the angle so the
trailer drops off faster, then
you can shove the boat off from
the ramp and not have to tilt
the trailer, this lets the next
boat in a lot faster.

Thanks for any consideration
that you can give this asking
for I have retired and love
to fish & hunt

Group Floating Dock Specifications

DEPARTMENT OF THE ARMY
ROCK ISLAND DISTRICT, CORPS OF ENGINEERS
CLOCK TOWER BUILDING
ROCK ISLAND, ILLINOIS 61201

REPLY TO
ATTENTION OF:

March 1979

GROUP FLOATING DOCK SPECIFICATIONS

1. Permits will be granted on a group basis except where applicants provide sufficient justification, such as only person in area, proof that neighbors are not interested, etc. For an individual permit, it is further required that the applicant furnish a signed statement that he understands that other applicants may be placed with his dock to form a group at a later date.

2. Requirements.

a. Name, signature, address, boat license number or numbers, and lot number of each member of the group shall be furnished on a separate sheet of paper attached to application.

b. Vicinity and Site Map: Show location of proposed facility in relation to Reservoir, including US Government Tract Number.

c. All group boat docks will meet or exceed the minimum design standards. The docks may be privately constructed or of a manufacturer's standard design.

d. Plans and specifications for the dock must accompany the application. The dock plan will show the configuration of the dock and the relation of the dock to shore including location of walkways and shore anchors.

e. Plans and specifications will be subject to the approval of the Resource Manager at the Lake project. Signs will be constructed and maintained as directed by the Resource Manager completely at the expense of the applicant (s).

f. See the back of the application for other information and conditions concerning the permit.

3. Minimum Design Standards.

a. All wood material shall be seasoned dimension stock lumber, either pressure or surface treated with pentachlorophenol or other standard wood preservatives. The only exception to the requirement is that non-treated deck planking may be used at the option of the permittee, since some treatment methods render the wood surfaces slippery when wet. Failure to treat, however, will reduce the life of the decking.

b. Anchoring devices will consist of metal standoffs, metal cable, or chain, firmly attached to the dock and to suitable anchoring devices on the shore. Cable anchor connections to the dock are to be by 3/4" eyebolts. Trees will not be used for anchoring devices. Spuds or cable anchor devices that extend seaward of the dock will not be permitted.

c. Bracing will be designed so that the structure will have sufficient flexibility whereby wave actions will not damage the structural or roof system.

d. Flotation shall be polystyrene logs, foam filled containers, i.e., corrugated metal pipe, or fiberglass cylinders, or a standard manufactured item if it meets the above flotation requirements. Barrels, drums, metal tubs or similar items, whether new or used, will not be permitted as flotation devices. No flotation device that will become waterlogged or sink when punctured will be permitted. Use of polystyrene material is recommended. Flotation shall be adequate to maintain a stabilized and safe dock.

e. Polystyrene quantities required for group docks are:

Length (ft)	<u>Main Dock</u>		Length (ft)	<u>Slip</u>	
	Polystyrene (cf)			Polystyrene (cf)	
10	33		15	33	
12	39		16	35	
14	46		17	37	
16	52		18	39	
18	59		19	40	
20	65		20	41	

4. Appurtenant structures permitted in conjunction with group docks are:

a. Foot lockers or storage lockers. These lockers shall not exceed one locker per slip. Height of lockers shall not exceed 5 feet, width and depth shall not exceed 4' x 4'. Lockers may be positioned with the maximum dimension either vertical or horizontal. However, all positioning shall be uniform on any given dock.

b. Bumper strips around docks are optional. A strip of white material no more than 2 inches wide may be affixed or painted on the vertical seaward edge of the dock to provide for night visibility. Reflectors may be used in lieu of the white material if desired. Reflectors will be spaced no closer than 3 feet apart. The remainder of the dock shall be of a neutral color so as to blend into the natural background.

c. Roofing may be permitted over the slip portion, only, of a dock. The body of the dock, fingers or walkways will not be covered. If the covering is of a standard manufacturer's item, the maximum height of the eave of the roof is 7.0 feet. Sides, canvas siding, or awnings on the docks are not permitted.

d. Roofs may be flat (slightly sloped) or pitched. "Slightly sloped" means designed to provide adequate drainage. Types of roofing material must be light and durable. Types applicable are fiberglass panels, corrugated roofing, metal or plastic, and other types that are equivalent. All roofing material shall be of a neutral color so as to blend into the natural background. White, yellow, orange, or other high visibility paints or coloring will not be used.

e. Polystyrene quantities required for group covered docks are:

<u>Main Dock</u>		<u>Slip</u>	
<u>Length (ft)</u>	<u>Polystyrene (cf)</u>	<u>Length (ft)</u>	<u>Polystyrene (cf)</u>
10	38	15	40
12	44	16	42
14	50	17	44
16	55	18	47
18	60	19	50
20	65	20	52

5. Construction Details. In wood construction, all connections shall be secured with galvanized bolts, screws, nails, and washers to resist movement that would tend to dismantle the structure. In covered docks, all columns shall be adequately braced to resist wind and wave actions. Roofs shall be securely fastened to the dock structure to resist wind uplift.

Lakeshore Management Regulations

DEPARTMENT OF THE ARMY
ROCK ISLAND DISTRICT, CORPS OF ENGINEERS
CLOCK TOWER BUILDING
ROCK ISLAND, ILLINOIS 61201

REPLY TO
ATTENTION OF:

NCROD-R

LAKESHORE MANAGEMENT REGULATIONS

PERTAINING TO CORALVILLE LAKE, IOWA

1. Purpose and Scope.

a. Purpose. The purpose of this regulation is to provide guidance in establishing a policy on the protection of desirable environmental characteristics of Coralville Lake and the restoration of shorelines where degradation has occurred through private exclusive use.

b. Scope. Shoreline shall be construed as that portion of a project, whether covered by water or not, that is owned in fee by the United States. Easement lands held by the Corps of Engineers are not considered under this regulation but are subject to the restrictions stated in the easement document.

c. References.

- (1) Section 4, 1944 Flood Control Act, as amended, PL 87-874.
- (2) The Act of 31 August 1951 (31 USC 483a).
- (3) The National Environmental Policy Act of 1969, PL 91-190.
- (4) Title 36, Chapter 3, Part 327, Code of Federal Regulations.
- (5) 33 CFR 330-339, "Regulatory Program of the Corps of Engineers" •
- (6) Engineer Regulation 1130-2-406, dated 13 December 1974.
- (7) An Act for the Preservation of American Antiquities, June 8, 1906, PL 59-209.

d. Policy. It is the policy of the Chief of Engineers to manage and protect the shorelines of all Lakes under his jurisdiction, to properly maintain fish and wildlife habitat, aesthetic quality, natural environmental conditions, protect cultural resources, and to promote the safe and healthful use of the shorelines for recreational purposes by all of the American people. Ready access to, and exit from, these shorelines for the general public shall be provided in accordance with reference c (1) of this section. It is the objective of the Corps to minimize the appearance of private exclusive use of public property and to maximize benefits to the general public.

2. Zoning. Each project will be zoned as follows:

- a. Limited Development Areas.
- b. Public Recreation Areas.

c. Protected Lake Shore Areas.

d. Prohibited Access Areas.

Private development can be considered only in that part of the project designated as limited development areas. Public access is permitted on all Lake Shore lands except prohibited access areas. Prohibited access areas are so designated because of safety, security or operational reasons and are accessible to authorized personnel only.

3. Development Permitted. In no case will permitted facilities reach a density exceeding 50% of the designated limited development area. No development will be permitted in present or future designated recreation sites.

4. Permits, Licenses, Leases or Easements. Applications for all structures or actions requiring a permit, lease, license or easement will be made to the Resource Manager at the project. Plans for the construction of any structure are required. The Resource Manager or his representative will make the initial inspection of the area in question with the applicant. In the event that the application is clearly unfeasible, the request will be denied at field level and a record of the action with the reasons for denial will be entered into the project files. If the application appears feasible, the application, plans and specifications or conditions, and the Resource Manager's recommendations will be forwarded to the District Office for processing.

All permits will be issued by the District Engineer. Leases or licenses will be issued by the Rock Island Field Office of the North Central Division of the US Army Corps of Engineers. Inspections for compliance with the conditions of the lease/license/permit shall be the responsibility of Recreation-Resource Management personnel. Any noncompliance with the provisions of the lease/license/permit will be corrected at the field level when possible. In the event that these noncompliances cannot be resolved at the field level, recommendations for revocation of the lease/license/permit will be promptly forwarded, through channels, to the District Engineer or his authorized representative for action.

In the event that a permit for a floating facility is revoked, certain appeal rights are available to the permittee. By giving 30 days written notice, either by certified or registered letter, the District Engineer may revoke a permit for a floating facility whenever he determines that the public interest necessitates such revocation or when he determines that the permittee has failed to comply with the conditions of the permit. The revocation notice shall contain the reasons for such action. If within the 30-day period, the permittee, in writing, requests a hearing, the District Engineer shall grant such a hearing at the earliest opportunity. At the conclusion of such hearing, the District Engineer shall render a final decision in writing and mail such decision to the permittee by registered or certified mail. The permittee may, within 5 days of receipt of the decision of the District Engineer, appeal such decision to the Division Engineer. The decision of the Division Engineer shall be rendered as expeditiously as possible and shall be sent to the permittee by registered or certified mail. The permittee may, within 5 days of receipt of the decision of the Division Engineer, appeal such decision in writing to the Chief of Engineers. The decision of the Chief of Engineers shall be final and no further appeal may be taken.

In spite of the above conditions, the District Engineer may summarily revoke a permit if, in his opinion, emergency conditions justify such action.

5. Conditions of Permits, Licenses or Leases. Private facilities located on water resource projects must be covered by a permit, lease, or license. All private facilities not so covered will be considered unauthorized structures and will be removed without delay in accordance with Part 327.20, Title 36, CFR. In addition, the individual responsible for the unauthorized structure is subject to all penalties provided by applicable statutes.

No private facility will be permitted on Corps' lands until such time as the lessee, licensee, or permittee has a valid instrument in his possession and the private facility has been constructed in accordance with approved plans, inspected, and approved by the Resource Manager or his representative.

All construction carried out on Corps' lands; i.e., seawalls, steps, etc. shall be at the direction of, and under the supervision of, the Resource Manager or his representative. In the event that such construction does not meet minimum required standards, work will be promptly halted until such time as those standards are met.

In the event that standards are not met or other provisions of the license, lease or permit are violated, the permit/license/lease will be revoked and the structure will be removed by the owner. In the event that the owner does not remove the structure within 30 calendar days of a written notice to do so, the structure will be impounded and removed by project personnel. Impoundment procedures will be carried out in accordance with current regulations. The only exception to the impoundment provisions as stated in this paragraph is the appeal rights for floating facilities outlined in paragraph 4.

6. Durations and Fees Charged for Permits, Leases or Licenses. Duration of permits, leases or licenses and fees for such privileges shall be as follows:

a. Private floating facilities, 5 years. The charge will be \$10.00 for the permit plus \$5.00 inspection fee per annum for a total of \$30.00 over the life of the permit. No charge will be made for modifications such as "add on" slips during the life of the permit.

b. The fact that a permittee has obtained a Corps permit for a group dock in no way absolves him from obtaining required State or local permits, if any.

c. Fees for private group boat docks will be charged on and after September 1979.

d. All other facilities covered by a lease or license. Generally a license is issued for a term of 5 years. In some cases, leases are for a longer period of time. The charge is fair market rental in accordance with applicable Real Estate regulations. All fees for the life of the instrument will be rendered before the instrument will be issued. In the event that the instrument is terminated before its expiration date, no portion of the fees will be rebated for the unused tenure of the instrument. Fees may be in the

form of cash, check, or money order payable to the Treasurer of the United States. Only the exact amount of the fees will be accepted. A receipt will be given for cash transactions.

7. Private Facilities Located in Areas not Designated for Private Development. In the event that any private facilities are currently located in nondesignated areas, the instrument holder may renew his permit or license on the expiration date of the permit or license during the lifetime of the licensee or until he terminates his interest in the facility. At that time, the instrument is automatically voided and the facility will be removed at the licensee's expense and within thirty (30) calendar days of expiration.

No new permits or licenses will be issued in nondesignated areas. Any community docks located in nondesignated areas and covered by the above grandfather conditions will not contain the usual provisions for "add on" slips. If a member of a group terminates his interest in the dock, his portion of the dock will be removed within thirty (30) calendar days.

All single private docks, regardless of location, will, by 1 September 1979, be either: (a) removed or (b) if located in approved areas, will be combined into approved community docks (built according to minimum specifications).

8. Eligible Parties. Individuals eligible to have a community dock or other permitted facility outlined in this regulation are limited to:

- a. Persons with a dock currently on the Lake.
- b. Persons who rent or own property adjoining Government lands in the vicinity of the designated "Limited Development Areas".
- c. Persons who reside in the immediate proximity of the designated "Limited Development Areas".

9. Approved Private Facilities or Actions That May Be Permitted or Licensed.

- a. Group Boat Docks.
 - (1) All group boat docks will be constructed to minimum basic standards. The docks may be privately constructed or of a manufacturer's standard design as explained in the following subparagraphs.
 - (2) Flotation shall be polystyrene logs, foam filled containers; i.e., corrugated metal pipe, or fiberglass cylinders, or a standard manufactured item if it meets the minimum requirements. Barrels, drums, metal tubs or similar items, whether new or used, will not be permitted as flotation devices. No flotation device that will sink when punctured will be permitted.
 - (3) Anchoring devices will consist of metal standoffs, metal cable, or chain, firmly attached to the dock and to suitable anchoring devices on the shore. Trees will not be used for anchoring devices. Spuds or cable anchor devices that extend seaward of the dock will not be permitted.

(4) Appurtenant structures permitted in conjunction with group docks are:

(a) Foot lockers or storage lockers. These lockers shall not exceed one locker per slip. Height of lockers shall not exceed 5 feet, width and depth shall not exceed 4' x 4'. Lockers may be positioned with the maximum dimension either vertical or horizontal. However, all positioning shall be uniform on any given dock.

(b) Roofing may be permitted over the slip portion only, of a dock. The body of the dock, fingers or walkways will not be covered. Sides will not be permitted. Unless the covering is of a standard manufacturer's item, the maximum height of the eave of the roof is 7.0 feet. All roofing material shall be of a neutral color so as to blend into the natural background. Canvas siding or awnings are not permitted.

(c) A strip of white material no more than 2 inches wide may be affixed or painted on the vertical seaward edge of the dock to provide for night visibility. Reflectors may be used in lieu of the white material if desired. Reflectors will be spaced no closer than 3 feet apart. The remainder of the dock shall be of a neutral color so as to blend into the natural background.

b Bank Ties. Bank ties will be permitted in the Limited Development Areas. They will consist of one or more concrete anchors of sufficient size to hold the vessel being moored. Plans for bank ties shall be approved in advance by the Resource Manager.

c. Mooring Buoys. State approved mooring buoys will be permitted in the Limited Development Area after coordination with the Corps' Resource Manager.

d. Stairways or Steps. Stairways or steps are permitted. Building materials shall be of metal, wood, stone or similar material that can be removed if required. Massive placed concrete or mortared block, brick or stone structures will not be permitted. In the event that such masonry structures are currently in place, they may be permitted to remain in place during the lifetime of the licensee or until he sells the property, provided that a license is applied for on, or before, 1 August 1979. All steps and stairways, if painted, will be painted a neutral color so that they will blend into the natural background. White, yellow, orange, or other high visibility paints or coloring will not be used. All steps or stairways constructed of a floatable material shall be firmly anchored in place. Trees shall not be used as anchoring devices.

e. Erosion Control Devices. Erosion control devices may be permitted where bank erosion is causing a problem. Only materials of a durable nature will be permitted. The erosion control structure may be of the riprap type or placed concrete or masonry. These structures shall not extend appreciably above the conservation pool level. Erosion control structures will be covered by the constraints of a 404 permit and/or a real estate license. When the license or permit expires or is terminated, the structure may or may not have to be removed at the option of the Corps. Plans for the structure must be approved by the District Engineer or his authorized representative before any work is undertaken.

f. Foot Paths and/or Foot Bridges. Foot paths and/or foot bridges are permitted. Foot paths shall not exceed 3 feet in width and may be paved with creek gravel, crushed stone, tanbark, wood chips, stepping stones or other readily removable material. Asphaltic concrete or concrete shall not be used for foot path surfaces. Foot bridges shall be permitted where required to cross ravines, ditches, etc., in conjunction with a foot path. Such structures shall be constructed of either wood or metal materials. If these materials are aluminum or galvanized material, they shall be painted a neutral color so as to blend into the natural background. If a bridge is constructed of floatable material, it shall be firmly anchored down. Trees will not be used as anchoring devices.

g. Vegetation Alteration, Tree Cutting, Trimming and Burning. Vegetation alteration; i.e., removal of undesirable underbrush and selected tree removal will be permitted.

(1) Undesirable vegetation; i.e., poison ivy, oak or sumac, vines, briars, etc., may be removed if prior permission is obtained from the Resource Manager and a permit for same is obtained.

(2) No herbicide may be used for vegetation control.

(3) Driftwood or other floating debris may be removed from the shoreline for a width no greater than that of the adjoining lot by authority of a permit.

(4) All drift, debris, tree laps, etc., may be burned unless prohibited by State or local laws or regulations. All burning shall be confined to that area between minimum pool levels and conservation pool levels or to an area designated by Recreation-Resource Management personnel. All applicable burning and clean air codes, laws, rules and regulations shall be adhered to. In the event that a burning permit is required, it shall be incumbent upon the permittee or licensee to obtain the permit and to present it upon demand to authorized Corps personnel. In the event that burning is prohibited or undesirable, the above-referenced material may be removed and disposed of offsite.

h. Landscaping.

(1) Flower or vegetable gardens shall not be permitted.

(2) Formal arrangements of hedges and shrubs will not be permitted except that an approved hedge may be planted and maintained on the property line. Such planting material shall be approved by Recreation-Resource Management personnel. All planting materials used on Corps-owned land shall be at Corps expense and under Corps supervision.

(3) Tree trunks, boulders, stumps, or rock outcrops shall not be painted or whitewashed. They shall be left in their natural condition.

(4) Swings, picnic tables, signs, patios, etc. will not be permitted on Corps-owned land.

i. All Federal and State laws, rules and regulations are in force in the hunting, taking or trapping of all fish and game species.

j. Archaeological Sites and Cuts and Fills.

(1) The digging into, excavating, disturbing or removal of an archaeological site or artifact is prohibited. Disturbing or removing any cultural remain is subject to the provisions and sanctions of the Antiquities Act of 1906 and/or Part 327.14, Title 36, CFR.

(2) No permit, lease or license will be issued by the District Engineer or his authorized representative for any structure or action that will affect a cultural resource until proper steps have been taken to protect or preserve the resource.

(3) The alteration of the natural terrain by making cuts or fills, unless in conjunction with construction of a legal authorized facility, is prohibited.

10. Prohibited Items. The following items are prohibited.

- a. Boat houses.
- b. Piers.
- c. Buoys (other than mooring buoys).
- d. Any building or structure not covered by a permit, license or lease.
- e. Any sewage outfall or structure unless covered by a license or lease.
- f. Wells or spring developments.
- g. Fences.
- h. Devices such as fenders, bumpers, camels, or matting made from old tires, logs, etc.
- i. Garbage, debris or refuse dumps or garbage pickup points unless covered by a license or lease.
- k. Boat ramps.
- l. Roadways, turn-arounds, and parking areas.
- m. Electric lines and/or water lines.

11. All licenses or permits are nontransferable. In the event the original instrument holder dies or terminates his interest in the instrument, the instrument will automatically become void.

12. The placement of any of the facilities or any action taken in regard to vegetation alteration, terrain modification, archaeological disturbance or artifact removal as spelled out in this regulation without benefit of a permit, license or lease is a violation of Chapter III, Part 327, Title 36, Code of Federal Regulations. Violations of this regulation may be punishable by a fine of not more than \$500.00 and/or imprisonment not to exceed six months.
